Server OS Installation

Objectives:

At the end of this episode, I will be able to:

1. Identify the appropriate installation type, tools and techniques given a scenario.

Exam Objective: *2.1 - Given a scenario, install server operating systems.*

Description: In this episode, the viewer will identify a variety of techniques and tools used to install server operating systems such as using the GUI, remote and automated installations, media installation types and imaging techniques.

- Installations
  - Graphical user interface (GUI)

    ```
    Easiest installation
    ```

  - Core

    ```
    Requires a little more skill - Windows install without desktop
    experience
    ```

  - Bare metal

    ```
    When installing virtualization software, the hypervisor sits below where
    the OS is installed. This is called a Type 1 hypervisor
    ```

  - Virtualized

    ```
    This is the type of installation that we are doing here , however you
    can also create a clone of an existing VM that is a
    ```

  - Remote

    ```
    These are typically unattended installations that requiring little
    interaction through scripting, and a master image that has all third
    party drivers, patched and additional applications installed before hand
    and then the OS is imaged or cloned
    ```

  - How we install the OS is based on the media type
    - Network through PXE (unattended, scripts)
    - Optical (local installation)
    - USB (common installation type, due to lack of optical drives)
    - Embedded (specialized)
