Server Storage Management

Objectives:

At the end of this episode, I will be able to:

1. Identify common tools and techniques used to perform storage management.

Exam Objective: *2.3 - Given a scenario, configure and maintain server functions and features.*

Description: In this episode, the viewer will identify tools and techniques used to perform storage management such as provisioning, partitioning, compression, deduplication, connectivity, location and sizing.

- Storage management
  - Creating Pooled Storage

    ```
    Use Server Manager > File and Storage Services
    to create a Storage Pool
    ```

  - Create a New Virtual Disk
    - Enclosure awareness (fault tolerance)
  - Storage Layout
    - Mirror (fault tolerance)
  - Provisioning
    - Thick Provisions (thin vs. thick)
  - Formatting
    - Apply NTFS file system, default allocation size, no volume label
  - Data Deduplication
    - Enable
    - Configure weekend optimization schedule
  - Set Permissions
    - Shared - full control
    - NTFS - r, w, x
  - Configure Quotas Storage Services > Shares
    - Set quota
    - Right-click the shared folder/volume and choose Quotas
  - Test connectivity
    - From filesrv02 connect to filesrv01\edutainer
