Data Migration and Transfer

Objectives:

At the end of this episode, I will be able to:

1. Identify data migration and transfer techniques and tools.

Exam Objective: *2.3 - Given a scenario, configure and maintain server functions and features.*

Description: In this episode, the viewer will identify tools and techniques used in data migration and transfers such as infiltration, exfiltration, Robocopy, File Transfer Protocol, Secure FTP, FastCopy, and Secure Copy Protocol.

- Data migration and transfer
  - Why migrate data?
    - Newly deployed server
    - Server maintenance or upgrades
    - Storage upgrade or maintenance
  - Transfer utilities (compatibility, security and performance)
    - FTP, SFTP
    - Robocopy, xcopy, copy
    - cp, dd
    - WinSCP
    - SCP
    - FastCopy
  - Migrate Windows user data
    - On filesrv02 create a new virtual disk with a volume called backups"
    - Set permissions (shared = full control; ntfs = r,w,x)
    - Connect from filesrv02 to filesrv01 (SMB\ via File Explorer)
    - On filesrv02 run SCP

      ```
      scp -r administrator@10.10.10.150:e:\edutainers z:\backups
      ```

  - Confirm successful data migration

    ```
    cd z:\backups
    dir
    ```

External Resources:

During this episode, you can reference the following external resources for supplementary tools and information:

- Robocopy - https://docs.microsoft.com/en-us/windows-server/administration/windows-commands/robocopy
- Secure Copy Protocol - https://www.geeksforgeeks.org/scp-command-in-linux-with-examples/
- WinSCP (for SCP, FTP and SFTP)- https://winscp.net/eng/index.php
- FastCopy -https://fastcopy.jp/
