Server Monitoring

Objectives:

At the end of this episode, I will be able to:

1. Identify tools and techniques to perform server monitoring. Identify key attributes of event logs.

Exam Objective: *2.3 - Given a scenario, configure and maintain server functions and features.*

Description: In this episode, the viewer will identify tools and techniques to perform server monitoring and associated concepts like uptime, thresholds, and performance metric such as memory, disk network and CPU utilization. The viewer will also identify different event log attributes such as alerting, reporting, retention and rotation.

- What are we monitoring when it comes to performance?
  - Memory
  - Disk
    - Input output operations per second (IOPS)
    - Capacity vs. utilization
  - Network
  - Central processing unit (CPU)
  - Uptime
- Monitoring
  - Real time
    - Performance Monitor (Windows)
    - Resource Monitor (Windows)
    - Task Manager (Windows)
    - top/htop (Linux)
    - uptime (Linux)Thresholds
- Cloud-based dashboard
  - Overview blade of the VM
    - CPU, network, memory, disk
- Event logging and reporting
  - Configuration
    - Logging, thresholds and alerting
    - Log retention and rotation
