High Availability Concepts

Objectives:

At the end of this episode, I will be able to:

1. Identify key concepts of high availability.

Exam Objective: *2.4 - Explain the key concepts of high availability for servers.*

Description: In this episode, the viewer will identify techniques and tools to maintain high availability for servers such as clustering, fault tolerance, network infrastructure redundancy, NIC teaming and link aggregation.

- Server Clustering
  - Active/Active vs. Active/Passive
  - Heartbeat
  - Patch management considerations
  - Server-level redundancy
- Network interface card (NIC) teaming and redundancy
  - Failover
  - Link aggregation (LACP)
- Load Balancing
  - Active/Active vs. Active/Passive
  - Heartbeat
- Round Robin and most recently used
- Software vs. hardware
