Identity and Access Management

Objectives:

At the end of this episode, I will be able to:

1. Identify identity and access management technologies.

Exam Objective: *3.3 - Explain important concepts pertaining to identity and access management for server administration.*

Description: In this episode, the viewer will identify techniques to govern control to resources through identity and access management such as directory services, password policies, multifactor authentication (MFA), single sign-on and auditing.

- What is Identity and Access Management
- Active Directory
    - Centralized IAM solution
        - Easier user/group creation and management
    - Single user/group database
    - Highly scalable
    - Apply, enforce and monitor settings
    - SSO (increase security with MFA)
- Defining Password policies
    - Requirements and enforcement
        - Length,complexity, history, age
        - Lockout
        - Enforcement

        ```
        GPMC  = Comp. Setting > Win. Settings > Sec. Settings > Account Policies > Password policy
        ```

- Auditing
    - User activity (logins, resource access)
    - Group memberships
    - Resource access ``` Set auditing on directory services (Comp. Setting > Win. Settings > Sec. Settings > Local Policies > Audit Policy > audit directory services

    ```

---
