System Crashes and Lockups

Objectives:

At the end of this episode, I will be able to:

1. Identify tools and techniques to troubleshoot hardware failures.

Exam Objective: *4.2 - Given a scenario, troubleshoot common hardware failures.*

Description: In this episode, the viewer will identify system crashes as well as utilities such as event logs, Task Manager, Services consoles, dump files and Device Management.

- System Crashes
  - Random (memory, overheating, application, driver)
  - Persistant (component failure, OS corruption)
- Crash screens
  - Blue screen
    - Windows General Protection Fault (GPF)
    - C:\Windows\minidump
    - Event Viewer > System > Filter Log > Error/Critical
  - Purple Screen
    - ESXi Hosts
    - VMWare Kernel
    - Close
  - Kernel Panic
    - Unix-like systems (Linux/macOS)
- System lockups and hangs
  - Driver issues (Device Manager)
    - Missing
    - Corrupted
    - Incompatible
    - Incorrect
  - Improperly seating hardware components
